

Stanbio hCG Tri-Level Serum Control Set, Procedure No. 1235

For Use as hCG Pregnancy Controls in Qualitative Serum hCG Pregnancy Procedures

Summary and Principle

Controls, when assayed with actual specimens, help a laboratory evaluate whether a given procedure is performing with acceptable accuracy and precision.

Stanbio's hCG Tri-Level Serum Control Set contains two positive controls (low and high) and a negative control (no detectable hCG) prepared in human serum with added preservatives.

Reagents

High Positive hCG Serum Control (Red Cap), Cat. No. 1232

@ 250 mIU/mL hCG in human serum with preservatives.

Low Positive hCG Serum Control (Yellow Cap), Cat. No. 1233

@ 25 mIU/mL hCG in human serum with preservatives.

Negative hCG Serum Control (Green Cap), Cat. No. 1234

Human serum containing no detectable level of hCG with added preservatives.

Precautions: For In Vitro Diagnostic Use.

This human serum has tested negative for hepatitis B surface (HBsAg) antigen and HIV.

Caution: Handle with same precautions as used for patients, since no known test can offer that products manufactured from human blood will not transmit disease.

Reagent Preparation: HCG Tri-Level Serum Controls are supplied ready-to-use.

Reagent Storage and Stability: HCG Tri-Level Serum Controls are stable until expiration dates on respective labels when properly stored at 2-30°C. Once opened, controls are stable for 90 days when properly stored at 2-30°C and kept tightly capped after each use.

DO NOT USE IF CONTAMINATION IS EVIDENT.

Procedure

1. Remove hCG Tri-Level Serum Control Set from storage and allow to reach room temperature prior to use.

This human serum has tested negative for hepatitis B surface (HBsAg) antigen and HIV.

Caution: Handle with same precautions as used for patients, since no known test can offer that products manufactured from human blood will not transmit disease.

Reagent Preparation: HCG Tri-Level Serum Controls are supplied ready-to-use.

Reagent Storage and Stability: HCG Tri-Level Serum Controls are stable until expiration dates on respective labels when properly stored at 2-30°C. Once opened, controls are stable for 90 days when properly stored at 2-30°C and kept tightly capped after each use.

DO NOT USE IF CONTAMINATION IS EVIDENT.

Procedure

1. Remove hCG Tri-Level Serum Control Set from storage and allow to reach room temperature prior to use.

- Follow the test procedure located in manufacturer's package insert for performing each test.
Remove cap from control vial and add the same number of drops (2) to the sample well as an actual patient specimen.
DO NOT MIX CAPS FROM DIFFERENT VIALS!
- After use, replace cap tightly on control vial and return to test box for storage.

Results

The hCG Tri-Level Serum Controls are quantitated by an EIA hCG assay and tested against each of Stanbio's hCG immunoassay products. See appropriate package insert for interpretation of test results.
